Revision No. 14.01

Awareness and preparation is the key to safe excavation

Every year **damage to pipelines** is either sustained or narrowly avoided by works carried out by landowners or their contractors.

Whatever the reason, damaging a pipeline could not only be costly but could also cause serious injury.

Please contact the pipeline operator to ensure that your works are safe.

Types of works of interest include (but are not limited to)

Fencing, ditch cleaning, drainage works, mole ploughing, subsoiling and installation of services within 50m of the pipeline.

The pipeline operator will be happy to discuss the works with you.

Don't take a risk - make a phone call or enquire FREE via www.linsearchbeforeUdig.co.uk

If you do not know who to contact visit the Linewatch website at

www.linewatch.co.uk and we will arrange for the correct operator to contact you

or contact
